

5.PS1:

Matter and Its Interactions

5.PS1.1

I can analyze and interpret data from observations and measurements of the physical properties of matter to explain phase changes between a solid, liquid, or gas.

5.PS1.2

I can analyze and interpret data to show that the amount of matter is conserved even when it changes form, including transitions where matter seems to vanish.

5.PS1.3

I can design a process to measure how different variables (temperature, particle size, stirring) affect the rate of dissolving solids into liquids.

5.PS1.4

I can evaluate the results of an experiment to determine whether the mixing of two or more substances result in a change of properties.

5.PS2: Motion and Stability: Forces and Interactions

5.PS2.1

I can test the effects of balanced and unbalanced forces on the speed and direction of motion of objects.

5.PS2.2

I can make observations and measurements of an object's motion to provide evidence that a pattern can be used to predict future motion.

5.PS2.3

I can use evidence to support that the gravitational force exerted by Earth on objects is directed toward the Earth's center.

5.PS2.4

I can explain the cause and effect relationship of two factors (mass and distance) that affect gravity.

5.PS2.5

I can explain how forces can create patterns within a system (moving in one direction, shifting back and forth, or moving in cycles), and describe conditions that affect how fast or slowly these patterns occur.

5.LS1: From Molecules to Organisms: Structures and Processes

5.LS1.1

I can compare and contrast animal responses that are instinctual versus those that are gathered through the senses, processed, and stored as memories to guide their action.

5.LS3:

Heredity: Inheritance and Variation of Traits

5.LS3.1

I can distinguish between inherited characteristics and those characteristics that result from a direct interaction with the environment. I can apply this concept by giving examples of characteristics of living organisms that are influenced by both inheritance and the environment.

5.LS3.2

I can provide evidence and analyze data that plants and animals have traits inherited from parents and that variations of these traits exist in a group of similar organisms.

5.LS4:

Biological Change: Unity and Diversity

5.LS4.1

I can analyze and interpret data from fossils to describe types of organisms and their environments that existed long ago.

I can compare similarities and differences of those to living organisms and their environments. I can recognize that most kinds of animals (and plants) that once lived on Earth are now extinct.

5.LS4.2

I can use evidence to construct an explanation for how variations in characteristics among individuals within the same species may provide advantages to these individuals in their survival and reproduction.

5.ESS1:

Earth's Place in the Universe

5.ESS1.1

I can explain that differences in the apparent brightness of the sun compared to other stars is due to their relative distances from the Earth.

5.ESS1.2

I can research and explain the position of the Earth and the solar system within the Milky Way galaxy, and compare the size and shape of the Milky Way to other galaxies in the universe.

5.ESS1.3

I can use data to categorize different bodies in our solar system including moons, asteroids, comets, and meteoroids according to their physical properties and motion.

5.ESS1.4

I can explain the cause and effect relationship between the positions of the sun, earth, and moon and resulting eclipses, position of constellations, and appearance of the moon.

5.ESS1.5

I can relate the tilt of the Earth's axis, as it revolves around the sun, to the varying intensities of sunlight at different latitudes. I can evaluate how this causes changes in day-lengths and seasons.

5.ESS1.6

I can use tools to describe how stars and constellations appear to move from the Earth's perspective throughout the seasons.

5.ESS1.7

I can use evidence from the presence and location of fossils to determine the order in which rock strata were formed. 5.ETS1: Engineering Design

5.ETS1.1

I can research, test, re-test, and communicate a design to solve a problem.

5.ETS1.2

I can plan and carry out tests on one or more elements of a prototype in which variables are controlled and failure points are considered to identify which elements need to be improved. I can apply the results of tests to redesign the prototype.

5.ETS1.3

I can describe how failure provides valuable information toward finding a solution.

ETS2:

Links Among Engineering, Technology, Science, and Society

ETS2.1

I can use appropriate measuring tools, simple hand tools, and fasteners to construct a prototype of a new or improved technology.

ETS2.2

I can describe how human beings have made tools and machines (X-ray cameras, microscopes, satellites, computers) to observe and do things that they could not otherwise sense or do at all, or as quickly or efficiently.

ETS2.3

I can identify how scientific discoveries lead to new and improved technologies.
